

# EverMark Stiles and Rails

EverMark continues to address the changing needs of door manufacturers by providing multiple solutions for each situation. Four stile and rail systems address different panel manufacturing issues and specific panel construction requirements. Product value, structural stability and moisture barriers can each be weighed to achieve the perfect fit to your product. All stiles and rails are carefully crafted, double-primed and can be fabricated to your specifications.

## STILES AND RAILS TO FIT EVERY NEED!

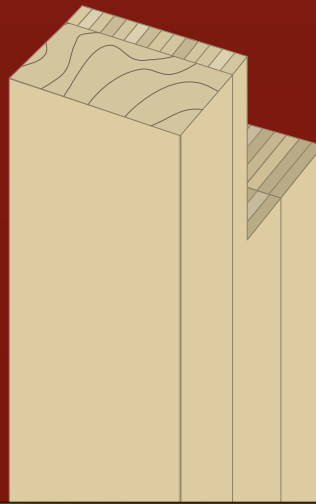

### Fingerjoint

*Sturdy finger-jointed stiles, with optional wood preservative treatment or primer, meets the needs of steel panel producers. Tried and true, fingerjoint provides the most cost effective stile and rail solution.*

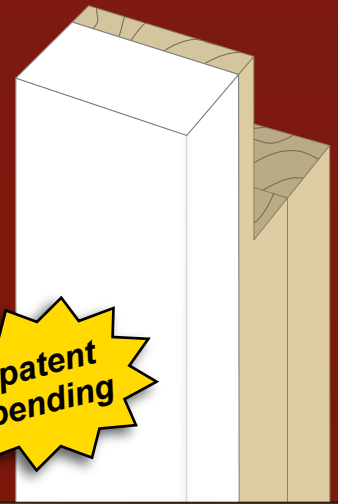

### LVL

*Laminated Veneer Lumber (LVL) stiles and rails still maintain value while providing additional protection against bow, warp and twist. Choose optional treating or priming for added value.*

### Fingerjoint/LVL

*Created to meet the needs of fiberglass panel producers, fingerjoint/LVL stiles and rails combine three layers of stability – a fingerjoint cap and two layers of LVL – oriented the same direction of the panel skin for maximum stability. Treated or primed options available.*

### EverStile™

*The ultimate in stile and rail construction. EverStiles employ three layers – a solid white PVC cap and two fingerjoint layers – to give a barrier impervious to rot or insect damage in addition to allowing for a minimum of bow, warp and twist.*

# EverMark Continues to Lead the Market in Innovative Design!

## Panel Skins

EverMark stiles and rails are designed to work seamlessly with your panel fiberglass, steel or wood veneer skins.

## Fabrication

EverMark can provide stiles and rails cut to length or fabricated to your specifications.

## Mix & Match

Combine fingerjoint with LVL or fingerjoint/LVL with EverStiles – the ability to fabricate to your specifications allows EverMark to provide the perfect solution to fit your needs.

## PVC Capped Stiles and Rails

EverStile stile and rails provide the maximum protection from insect and water damage by providing a 5/8" solid white PVC cap perimeter around the edge of the panel.
